

Turning Sand into Soil Great Garden's simple recipe for building your soil

Fabulous foundations. Like building a good strong home, building up your soil is all about the foundations. Your garden will thrive if you take the time to build up the soil that will be its home!

Use this recipe at the following ratio per square metre:

1. Approximately 30L of compost or soil builder mix
2. 2 - 5kg of soil amendments such as bentonite clay, zeolite, spongelite
3. One small handful of slow release lawn starter fertiliser
4. One cupped handful of wetting agent

Mix these components completely then rotary hoe or fork this mixture into the top 10 – 30cm of the soil then thoroughly soak and compact this. Your sand will have been transformed into a wonderful, dark and productive soil bed ready to launch your new garden to prosperity!
